Order: The most recent most beloved alphabetical order is The Matter puzzleUse with groups like a quick revision of activity or a starter to consider... Read more KS3 Chemical State Changes - Water KS3 Chemistry Spectrum interactive and printouts of practical activities provided by the Association of Scientific Education, To help children understand the properties of solids, liquids and gases and the changes that occur when materials are heated Information is provided through cartoons, downloadable sheets and ideas for experiments on the following topic of headlines: SolidsLiquidsChanging solids in liquid and back, liquids. Stage 2, but training links are also provided for Welsh, Scottish and Northern Ireland training programmes. The experiments have been adapted from those used in workshops for students aged 7-11 years at Making a Place or taken from This Is Chemistry by Ian Rees. This chemistry was produced as part of the Royal Society of Chemistry's education support programme and a copy was sent free of charge at every primary school in the UK in 2001 with the support of ABPI. More information about this resource, as well as details on how to order additional copies, can be found here. Guidelines are provided for activities that require special awareness of safe working practices. Teachers should use their knowledge of their students' abilities to choose the appropriate practical work for them. Please note that the resources have been published on the website as originally provided. This means that procedures reflect the general practices and standards applied at the time of resource receipt and cannot be considered acceptable today. Users of the website have full responsibility to ensure that any activity, including the practical work they perform, complies with applicable health and safety regulations and that an appropriate risk assessment is carried out. Download all files like .zip1.07 MB Order: The last most beloved alphabetical order All materials can be placed in one of three categories or states:1.Solids - the form of solid doesn't change in itself - it's tough. They also have a fixed volume. Liquids - the shape of the liquid changes, it is not rigid. It corresponds to the shape of the container in which it is placed. A stream of liquids. They also have a fixed volume. 3. Gases - gases are not shaped, they completely fill any container in which they are placed. They do not have a fixed volume, but the same volume as the container. Materials can vary from one of these states to another. Use PowerPoint to learn more... Find out what the temperature of the refrigerator and freezer What foods can be solids, liquids or gases in each compartment?
